

Franklin Boulevard Study outcomes

Revised by SAC, July 18, 2007

A successful Franklin Boulevard Study will result in:

Process outcomes (outcomes that apply regardless of the recommended design)

1. A process that is collaborative and transparent and is focused on achieving consensus around transportation improvements and providing certainty about future plans.
2. A project that minimizes or equitably addresses impacts to existing business owners, property owners and residents.
3. A funding strategy in which costs are paid in proportion to benefits received.

Evaluative outcomes (outcomes used to evaluate alternative designs)

1. A project that benefits the future business community as a whole.
2. A cost-effective project.
3. Improvements to Franklin Boulevard and McVay Highway that promote redevelopment in Glenwood.
4. Designs that are distinctive.
5. Designs that accommodate all transportation modes including car and truck traffic, buses, cyclists, pedestrians and alter-abled people.
6. Transportation improvements that can accommodate long-term transportation needs in the area.
7. Facility improvements that enhance the natural environment and include opportunities to incorporate sustainable design principles.
8. A project that creates an active and safe street environment.
9. A project that improves connections to the river.
